DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 11/30/05 has been entered. Currently, **claims 1-7, and 30-37** are pending.

Information Disclosure Statement

2. The references listed in the Information Disclosure Statements submitted on 3/28/06, 11/30/05, and 11/1/05 have been considered by the examiner (see attached PTO-1449's).

Allowable Subject Matter

3. **Claims 1-7 and 30-37** are allowed (renumbered as **claims 1-6, 8-15, and 7, respectively**).

4. The following is an examiner's statement of reasons for allowance:

Regarding **claims 1, 7, 30, and 36 (renumbered claims 1, 8, 9, and 15, respectively)**, in the examiner's opinion, it would not have been obvious to one of ordinary skill in the art at the time the invention was made to have the system, as claimed, include the features of having each

of the image forming devices configured to detect a signal line separation from at least one of a central service station and a communication control unit over a predetermined period, with the detection being periodically performed by each of the image forming devices, and displaying a signal line separation message when the image forming device detects a signal line separation.

The closest prior art, being the previously cited references of Ogura (European Patent Publication Number EP 0 768 582) and Ote *et al.* (U.S. Patent Number 5,815,652), along with the newly cited reference of Shimizu *et al.* (U.S. Patent Number 5,689,416), each fail to specifically teach of these features. Particularly, both Ogura and Ote fail to expressly disclose if each of the image forming devices, being one of a printer, copier, and a facsimile machine, detect a signal line separation from the central service station or communication control unit, and if each of the image forming devices are configured to detect the transmission fault over a predetermined period through a process periodically performed by each of the image forming devices. Shimizu discloses a computer system monitoring system which fails to expressly disclose if each of the image forming devices, being one of a printer, copier, and a facsimile machine, display a signal line separation message when the image forming device detects a signal line separation from the central service station or communication control unit. Therefore, because of these features, which were added in the amendment dated 8/3/05, the claims are rendered allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Pertinent Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Kitajima (U.S. Patent Number 5,739,921) discloses a facsimile communication system that detects and logs when a disconnection occurs. However, Kitajima fails to expressly teach if the detection is periodically performed by the facsimile device.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joe Pokrzywa whose telephone number is (571) 272-7410. The examiner can normally be reached on Monday-Friday, 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward L. Coles can be reached on (571) 272-7402. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
